To whom it may concern

Need Assessment for construction of New IPD Block in TLM Hospital, Vadathorasalur.

I hereby declare that I had gone through the need assessment for the construction of new in patient block at TLM hospital, Vadathorasalur and are ratified by me to the best of my knowledge and belief.

As per my observations The Leprosy Mission Hospital Vadathorasalur has the greater need of above said construction for the benefit of in patient service to the leprosy affected, disabled and poor marginalized people in and around Villupuram District.

The Leprosy Mission Hospital Vadathorasalur is one of the best referral hospital in the district to treat and management of leprosy reaction neuritis and ulcer.

Agricultural Officer
Need Assessment for construction of New IPD Block in TLM Hospital, Vadathorasalur.

The hospital is serving the leprosy affected people and other marginalized people for the last 102 years.

The ward referred here is beyond repair and needs to be constructed again. This will add to the in-patient capacity of the hospital and serve the poor people coming from nearby villages. In the absence of this facility the poor patients would have to travel to far off places.

The unprecedented and heavy rainfall which occurred during the end of November and December 2015 throughout Tamil Nadu, but with added severity in the coastal districts, had also left its trail of damages and havoc in the neighboring districts where the Campus of TLM Hospital is situated and large flakes of the underside of the ceiling are also dropping down as a result of the ingress of rainwater into the reinforced concrete. There is virtually no building which has been able to withstand this deluge.

SPALLING OF ROOFS
reinforced concrete slabs, and whatsoever is there is only adding and abetting the ingress of rainwater. The areas which have tiled roofs have also been leaking badly due to broken or spilled tiles.

Taking all these factors into account the repairs of the inpatient block would be almost equal to having anew construction of building to facilitate accommodating 40 inpatients along with a Operation Theater, to take care of the leprosy patients and also the poor and underprivileged patients in and around Vadathorasalur Village and also within the District of Villupuram.

CONCRETE SLABS AND WINDOW LINTELS

Adding to the misery, there is spalling of the ceiling concrete slabs. This has compelled the occupants to shift their belongs as well as to hubble together in cramped spaces to escape from this danger.

The wet and damp walls are also electrically unsafe and hazardous and occupants have complained of shocks.

The inspection of the roofs by the Consulting Engineer Mr. Pancharathnam reveals that there is no water proof protection worth mentioning for the
