

Project Overview

Vadathorasalur Hospital, through the proposed Rehabilitation and Training Unit, aims at addressing the shortage of specialised disability care in the Kallakurichi district by offering services, including orthotics and prosthetics, physiotherapy, occupational therapy, and support for developmental disorders and low vision.

Rationale

With no other dedicated disability care centre in the region, this unit will address a significant gap, providing advanced and accessible care that leverages technology to enhance quality and affordability, ultimately supporting greater independence and quality of life for individuals with disabilities.

Key Interventions

The unit will provide customised, technology-enhanced footwear services, orthotic and prosthetic care, general physiotherapy, occupational therapy, and inner well-being services to meet the diverse needs of individuals with disabilities across all age groups.

Target Beneficiaries

Approximately 40,000 individuals with disabilities in Kallakurichi and surrounding areas will benefit directly over a span of a few years. This includes people with locomotor disabilities, spinal cord injuries, diabetic foot complications, developmental disorders, and low vision. Caregivers and families will also benefit from improved support services.

Expected outcome

By improving mobility, independence, and access to specialised care, this project aims at enhancing community well-being, reducing healthcare disparities, and building local healthcare capacity through ongoing training in advanced rehabilitation techniques.

Project Overview

The centre will deliver comprehensive care for acute and chronic pain and provide mental health support for psychological distress, benefiting both leprosy-affected individuals and the general community in Muzaffarpur.

Rationale

Chronic pain and mental health needs among leprosy-affected and general communities are unmet. TLM Muzaffarpur aims at addressing this gap by providing specialised, innovative pain and mental health services to improve patient's quality of life.

Key Interventions

Through a multidisciplinary approach, this centre will offer pain management and mental health care with personalised treatment plans, pharmacological interventions, and dedicated mental health counselling by experienced professionals.

Target Beneficiaries

Outpatient (OP) and inpatient (IP) individuals, as well as those in the nearby villages of TLM Muzaffarpur requiring psychosocial support and pain management services.

Expected outcome

The project will enhance holistic well-being for leprosy-affected and general communities, establishing sustainable support for chronic pain and mental health needs in Muzaffarpur's catchment area.
