

### Project Overview

Under this project, the old section of the hospital at TLM Faizabad will be transformed into a comprehensive, state-of-the-art rehabilitation centre, providing specialised care and support for individuals with disabilities through institution- and community-based interventions.

### Rationale

A survey revealed high demand for rehabilitation services among people with disabilities in 20 districts. With limited facilities focused on disabilities across Faizabad and neighbouring districts, there is a critical need for specialised care for people with disabilities.

### Key Interventions

The project aims at renovating existing facilities to establish a state-of-the-art rehabilitation centre providing diverse age groups with disability prevention and management services, including geriatric rehabilitation. The centre will also be connected with the vocational training centre for training people with disabilities.

### Target Beneficiaries

This centre will benefit individuals affected by leprosy with disabilities, people with disabilities in 20 districts of Eastern Uttar Pradesh, and their families, along with students and professionals in disability rehabilitation.

### Expected outcome

The centre will provide services in paediatric and geriatric rehabilitation. It will also provide vocational rehabilitation by training people in vocational courses and preparing professionals to get back to their vocation after a gap due to their disabilities. It will be a resource hub for clinical services, research, training, and innovation. Facility enhancements, such as a sensory park and wheelchair training area will support long-term sustainability.

### Project Overview

Under the project, the old buildings in the campus will be converted into a dedicated space, reflecting The Leprosy Mission's (TLM) heritage and legacy. The campus will feature eco-friendly landscaping to create a green, carbon-neutral environment.

### Rationale

Preserving the heritage and legacy of TLM is essential for motivating future generations to work for the people affected by leprosy. Restoring these strong, historical buildings will prevent disuse and increase TLM's visibility. The Heritage Centre will provide quality accommodations for visitors while generating revenue and utilising the land productively.

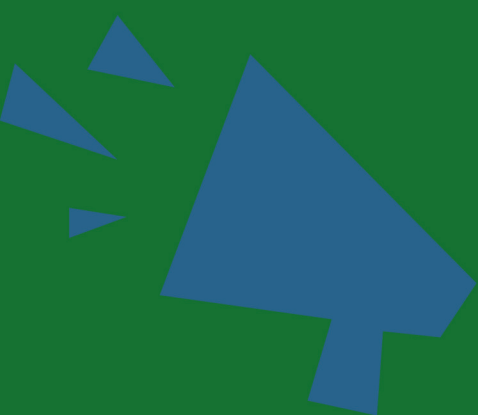

### Key Interventions

The main building will house a library, a museum containing archival material and modern guest houses. The museum and the guest houses will help generate revenue to support the Mission's leprosy and other health care services.

### Target Beneficiaries

The centre will be an interesting place to visit not just for the local communities but also the medical and paramedical students, international visitors, government officials, staff members across TLM Global fellowship, and other interested stakeholders.

### Expected outcome

The project will preserve TLM's legacy, create an efficiently utilised and self-sustaining facility, and ensure timely restoration of valuable assets.
